Product Description

GYFTY cable, or the Loose Tube Non-Metallic Strength Member, is an outdoor cable specifically designed for telecommunication and data transmission applications.

It comprises several loose tubes that are each filled with water-blocking gel to protect the fiber optic strands from moisture and other environmental factors.

The cable is equipped with a non-metallic central strength member and is surrounded by aramid yarn for added protection and flexibility.

The outer sheath is made of high-density polyethylene (HDPE) and provides excellent resistance to UV radiation, chemicals, and physical damage.

GYFTY cables are suitable for aerial, duct, and direct burial installations and are designed to meet the requirements of harsh outdoor environments.

They are available in various fiber counts to accommodate different capacity needs and are compatible with a wide range of splice and termination techniques.

Overall, GYFTY cables offer high performance, durability, and reliability, making them an ideal choice for long-distance and high-bandwidth communication networks.
