Product Description

GYTA Outdoor Fiber Optical Cable

Offering a substantial fiber count, GYTA fiber optic cables are built with a single jacket and armor configuration around a loose tube. They are designed for the flexibility and adaptability needed to meet the stringent installation requirements of today, suitable for both duct and underground conduit environments.

Features:

1. The cables boast reduced light scattering and low signal attenuation, enhancing the quality of signal transmission.
2. An intelligent design, precise control over excess fiber length, and a specific stranding approach yield the cables' excellent mechanical and environmental characteristics.
3. The armoring with corrugated steel tape ensures the cables have good resistance to moisture and crushing, safeguarding against environmental hazards.
4. The cables' small diameter and light weight are advantageous for easy and quick installation.
5. They are operational within a temperature range of -40 to +60 °C, demonstrating their versatility in different climatic conditions
