Product Description

GYTA33 12 24 36 core direct burial armored submarine loose optic cable

Products Descriptions

The GYTA33 undersea fiber cable, which can support 2 to 72 fibers, has a steel core for reinforcement and is filled with a gel material. The fiber is contained within a tube that may include polypropylene filler as needed, and is twisted around a gel that inhibits water. The cable is then covered with an aluminum tape that has a copolymer coating, placed inside a polyethylene inner sheath, reinforced by steel wire armor, and finished with a polyethylene outer sheath. It is a G652D single-mode fiber cable, with specifications that can be detailed as per your requests.

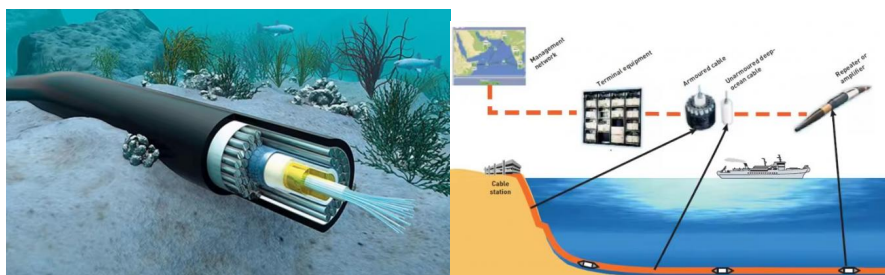

Product Details

Features:

- 1.The high-grade optical fiber offers excellent transmission properties.
- 2.The exact control of the fiber's additional length ensures excellent mechanical and thermal behavior.
- 3.The loose tubes, filled with a special gel, offer perfect protection for the optical fibers.
- 4.The all-encompassing water-blocking feature ensures the cable's core is reliably moisture-proof and water-resistant.
- 5.The central strength member, a corrosion-resistant, high-modulus phosphated steel wire, imparts the desired tensile strength. The cable's longitudinal armor, with a coated aluminum tape on both sides and a stranded steel wire armor, meets the specifications for high crush resistance, tensile strength, bulletproofing, and is appropriate for heavy-duty direct burial or underwater installation.
