## Product Description

### GYXTC8S Fiber Optic Cable Self Supporting Network Cable With Stranded Steel Products Description

#### GYXTC8S Fiber Optic Cable

The GYXTC8S cable is designed with a 250μm fiber core, encased in a flexible tube made from a material with high rigidity and infused with a gel that repels water. This tube is then wrapped with a plastic-coated steel tape (PSP) that runs the length of the cable. A water-blocking substance is interspersed between the steel tape and the tube to ensure the cable is watertight and prevents water from traveling longitudinally. Additionally, the cable includes an 8-shaped steel strand, all of which is encapsulated in a polyethylene sheath.

#### Detail Images

#### Features:

- 1.The steel wire within the strand offers remarkable tensile strength, which is advantageous for overhead self-supporting installations, thereby minimizing the costs of setup.
- 2.It possesses excellent mechanical and thermal properties.
- 3.The loose tube's material is naturally resistant to hydrolysis and is highly robust.
- 4.A unique grease is used to fill the tube, ensuring the protection of the fiber.
- 5.The application of a double-coated steel strip (PSP) boosts the cable's moisture resistance.
- 6.It is characterized by a small diameter, light weight, and ease of installation.
- 7.It is supplied in lengthy rolls and is priced affordably.
