Product Description

GYXTC8S Fiber Optic Figure 8 Cable Uni-Tube Self Supporting Waterproof Cable Products Description

GYXTC8S Fiber Optic Cable

The GYXTC8S cable features a 250μm fiber that is placed into a tube with a high modulus material, which is filled with a water-repelling gel. This tube is then coated with a longitudinal plastic-coated steel tape (PSP). To ensure the cable's compactness and its longitudinal water-blocking capability, a water-blocking substance is placed between the steel tape and the tube. The cable also includes a steel strand that is integrated into an 8-shaped configuration, all of which is covered by a polyethylene sheath.

Features:

1. The steel wire strand is characterized by an impressively high tensile strength, which aids in self-supporting overhead installation, reducing the associated setup costs.
2. It displays excellent mechanical and thermal properties.
3. The material of the loose tube is naturally strong and resistant to hydrolysis.
4. The tube is filled with a special grease to protect the fiber.
5. The double-coated steel strip (PSP) improves the cable's moisture resistance.
6. It is lightweight with a small diameter, making it easy to install.
7. It comes in long lengths and is competitively priced.
