## Product Description

### GYFTS53 Fiber Optic Cable Double Jacket Cable For Communication

#### Product description

The central strength of the GYFTS53 cable emanates from an FRP rod at its core. The cable's construction involves tightly twisting a loose tube and filler rope around this central member, filling any gaps with a water-blocking material. Subsequently, a plastic-coated steel strip is spirally wound and extruded with a polyethylene sheath. The final step in the cable's formation is the longitudinal wrapping of a double-sided plastic-coated steel strip, also extruded with a polyethylene sheath.

#### Product Details

#### Product Features

- Provides exceptional mechanical performance and temperature endurance.
- Enclosed by a high-strength, hydrolysis-resistant tube.
- Infused with a unique filling compound for fiber protection.
- Wrapped in a polyethylene sheath that offers UV protection.
- Capable of withstanding compression, fitting for duct and underground use.
- Centered around a single steel wire for structural support.
- Enriched with a special filling compound for fiber optic security.

Packed to the brim, leaving no room for air pockets.  
Furnished with a water-blocking tape to counteract vertical sinking.
