Product Description

GYFTS53 Fiber Optic Cable Underground Optic Cable With FRP Strength Member

Product description

An FRP rod forms the central strength of the GYFTS53 cable's core. The cable's core is created by tightly twisting a loose tube and filler rope around this rod, with water-blocking filler filling any gaps. A plastic-coated steel strip is spirally wrapped and then sheathed in polyethylene. The cable is completed with the longitudinal wrapping of a double-sided plastic-coated steel strip, also extruded with a polyethylene sheath.

Product Details

Product Features

- Upholds excellent mechanical strength and temperature steadiness.
- Enveloped by a robust, hydrolysis-resistant tube.
- Features a unique filling compound for fiber protection.
- Sheathed in polyethylene to provide UV resistance.
- Displays superior crush resistance, appropriate for duct and burial applications.
- Anchored by a single steel wire for central reinforcement.
- Employs a special filling compound for the defense of fiber optics.

Totally filled to eliminate any potential voids.
Includes a water-blocking tape to avert sinking during vertical installation.
