Product Description

ADSS OPGW OPPC Accessory Stay Rod

Product Introduction

This stay rod is used to connect the stay wire to the ground anchor, also known as the stay set. It ensures that the wire is firmly rooted to the ground and everything remains stable. There are two types of stay rods available in the market: the bow stay rod and the tubular stay rod. The difference between these two types of power-line accessories is based on their designs.

Product Features

The main materials used in their manufacture include steel, malleable cast iron, and carbon steel, among others. A stay rod has to go through the following processes before being zinc-plated or hot-dip galvanized. The processes include: "precision – casting – rolling – forging – turning – milling – drilling and galvanizing".
