Product Description

OPGW Fiber Optic Cable 12 16 cores Composite Overhead Ground Wire stainless armoured

Product descriptions from the supplier

OPGW is a hybrid cable designed to integrate optical fiber transmission with an overhead ground wire used in power transmission. It serves dual purposes by functioning as both an optical fiber cable and a grounding wire, protecting against lightning and carrying short circuit currents. The OPGW consists of an optical unit housed within a stainless steel tube, surrounded by aluminum-clad steel wire and aluminum alloy wire. It has a central stainless steel tube and a layered construction. The design can be tailored to different environmental conditions and customer needs.

Application:

Suitable for updating outdated ground wires and fitting into modern high-voltage ground wire systems. Ensures lightning protection and conducts short circuit currents, along with supporting optical fiber communication.
