The anchoring clamp is self-adjusting and designed to anchor ADSS optical fiber cable transmission lines. The ADSS tension clamp consists of self-adjusting plastic wedges which clamp the optical cable without causing damage. A wide range of gripping capacities is achieved by using different types of wedges in the ADSS anchor clamp.

The stainless steel bail allows installation of clamps on pole brackets or hooks, including in seaside areas. The ADSS tension clamp PA-3000 is available either separately or as an assembly with ADSS fiber optic cable brackets and stainless steel band.
