### Product Description

#### ADSS FIBER OPTIC CABLE Double Jacket All-Dielectric Self-Supporting(ADSS) Cable

Two Jacket and Stranded loose tube design. Stable performance and compatibility with all common fiber types. Track-Resistant outer jacket available for high voltage( $\geq 35$ KV). Gel-Filled buffer tubes are S-Z stranded. Instead of Aramid yarn or glass yarn, there is no support or messenger wire required. Aramid yarn is used as the strength member to assure tensile and strain Performance. Lightweight and small diameters reduce the load caused by ice and wind and the load on towers and backdrops. Large span lengths and the largest span is over 1000m. Good performance of tensile strength and temperature.

#### Application

Aerial

#### Advantages of Carefiber

Good Aramid yarn has excellent tensile performance.

Fast delivery, 200km ADSS cable regular production time of about 10 days

Can using glass yarn instead of aramid to anti-rodent

#### Benefits of ADSS Cable

ADSS cables rely solely on their dielectric properties, eliminating the need for metal support structures and reducing installation costs.

Designed to withstand high electric fields, ADSS cables perform reliably near high-voltage power lines without interference from electromagnetic fields.

With superior weather resistance and tensile strength, ADSS cables excel in harsh environments like coastal areas and high altitudes, ensuring long-term performance.
